Continuation of 11, does NOT place the application in condition for allowance because: Applicant's arguments filed 3/19/2009 have been considered but are not persuaview. The Asahi reference (JP 3052091 U) discloses the recited structure including a valve assembly having a rotatable valve member located within a valve housing having a substantially cylindrical flow passage and a top flange for mounting an operating unit by connecting bolts with the top flange being formed with a plurality of cutous schedning from ture prepipheral edge of the top flange toward the center thereof so that the connecting bolts can be moved in the plurality of cutous in a radial direction. Although the Asahi reference discloses the use of the valve assembly with a specific operating unit having specific connection bolts, the structure of the flange having a plurality of cutous extending from the outer peripheral edge toward the center would permit the flange to be adpated to be used with operating units having different pick diameters.
